

Abstract

A weapons assembly that includes a turret; a turret cage attached to and being disposed underneath the turret; a plurality of weapons supported in the turret, each weapon having a barrel and a belt magazine received in part in the turret and in part in the turret cage. The belt magazine has a loading belt and a plurality of horizontally disposed, ammunition-accommodating container tubes attached to the loading belt. The turret containing the plurality of barrels is vertically movable to an elevated position to provide up to an unimpeded 360 degree field of fire.
